Notes\Quizzes\Tests Grade 7

Subject	Note
Chemistry	Chemistry Project for Grade 7 The Density Column Objective: Students are encouraged to search for liquids with different densities and construct their own special column experimenting different material from their search and share with the teacher and their friends their unique experience. How to do your project: 1- Do your own researches and collect around 5 or more liquids to test their different densities. 2- Try layering these liquids into a density column (any tall container or glass you have at home) to observe how they will be arranged and the reason for this order. 3- Try to make your density column unique by experimenting lots of liquids, make it colourful, or even add weird objects to the column and examine how they will be positioned. 4- Write down all the steps you will follow and record your findings and results supporting it with nice pictures you took of your work. 5- Kindly, prepare a power point presentation including the description and the pictures you took for each step you made and the answer of the following question; How the Density Tower Works? 6-Then, make a folder with your name and upload your work in the chemistry file (Project Folder). Kindly note that chemistry project should be handled before Sunday, November 22, 2020.
